RESEARCH INTEREST

My research interests involve leveraging human speech for characterizing health, behavior, and mood using machine learning models. My research has touched on various topics, including automatic speech recognition, grapheme to phoneme conversion, acoustic feature analysis, and computational paralinguistics. My thesis work largely involves developing novel approaches to enable individuals with speech impairments to communicate effectively, which has driven my passion for advancing the field of speech technology to benefit a broader range of populations.

EDUCATION

University of Michigan, Ann Arbor 2017 – 2023 (*expected)*
Ph.D. in Computer Science and Engineering
Advisor: Dr. Emily Mower Provost

University of Michigan, Ann Arbor 2017 – 2019
M.S. in Computer Science and Engineering

University of Notre Dame 2013 – 2017
B.S. in Computer Science, *Cum Laude*

AWARDS

NSF Graduate Research Fellowship (GRFP) 2020 – 2023
GEM Ph.D. Engineering Fellowship 2019 – 2020
Dean's List, University of Notre Dame 2015 – 2017
Balfour-Hesburgh Scholar, University of Notre Dame 2013 – 2017

RESEARCH EXPERIENCE

Computational Human Artificial Intelligence (CHAI) Lab 2017 – Present
University of Michigan Ann Arbor, MI
My thesis is centered on developing automatic methods for those with disordered speech impairments. Projects span topics such as: accessible speech recognition, automatic paraphasia detection, and analysis tools for disease classification and severity estimation.

Research Assistant: Mobile Computing Lab 2015-2016
University of Notre Dame Notre Dame, IN
Investigated speech analysis methods for classifying mild traumatic brain injuries (concussions). I helped develop a tablet-based app for eliciting and analyzing speech tasks.

PROFESSIONAL EXPERIENCE

Research Intern *(Speech Synthesis Team)* 2022
Google Mountain View, CA
Finetuned large, self-supervised speech models for end-to-end, multimodal grapheme-to-phoneme (g2p) modeling. I showed that multilingual training improved model performance across multiple languages with significant performance improvements for low-resource languages.

Research Intern *(Speech/Signals Team)* 2021
Cogito Corporation Virtual
Researched novel approaches for multimodal fusion in large transformer-based models for speech emotion recognition. This work showed that modeling paralinguistic events such as silence within a BERT language model can lead to improved emotion recognition performance.

Research Intern *(Bioengineering Tech Systems Group)* 2019
MIT Lincoln Laboratory Lexington, MA
Researched speech-based articulation features for identifying across sets of neurological diseases (i.e. Parkinson's depression, Huntington's). The results showed there was an acoustic bias present in separate datasets which the articulation features were capturing.

Software Engineer Intern (*iOS team)* 2016
Garmin Olathe, KS
Contributed to the development of the Garmin iOS application, which syncs wearable device data to/from the iPhone. Specifically, implemented *Today Extensions* for the Garmin Connect Mobile app, which displays wearable health information like steps, activities, etc. I presented work to research teams and company executives.
